The gravitational potential ( $V$ ) at a location is the gravitational potential energy ( $U$ ) at that location per unit mass:  $V = U/m$ , where  $m$  is the mass of the object. Potential energy is equal (in magnitude, but negative) to the work done by the gravitational field moving a body to its given position in space from infinity.

In celestial mechanics, escape velocity or escape speed is the minimum speed needed for a free, non-propelled object to escape from the gravitational influence of a primary body, thus reaching an infinite distance from it. It is typically stated as an ideal speed, ignoring atmospheric friction. Although the term "escape velocity" is common, it is more accurately described as a speed than a ...

Una onda electromagnética es una onda transversal compuesta por un campo eléctrico y un campo magnético simultáneamente. Ambos campos oscilan perpendicularmente entre sí; las ecuaciones de Maxwell modelan este comportamiento..

Habitualmente se decide por convenio que para el estudio de la polarización electromagnética se atiende exclusivamente al campo eléctrico, ignorando el campo ...
