Elevated and Straight Zero Fret. Checking for zero fret height. When the zero fret is viewed as an extension of the fingerboard by adding one more fret wire before the nut, then the luthier would fit a fret wire of identical dimensions. This will decrease the string action at the lower fret positions.

If the blade wasnt getting forced up, it was getting tweaked to one side. Constantly. Stripper would start to cut straight then tweak to one side forcing me to loosen the blade, drop the bottom bearing, back the wire up, raise the bottom bearing again, position the blade again, then start pulling wire through. Again.

The black wire (hot wire) coming in from the left is the source power. It is tied together with a wire going to the switch and the black wire going to the outlet. The red wire (switched hot wire) going to the outlet, wires into the other side of the switch and the white wires (neutral), tie together to complete the return side of the circuit.

Furthermore, the resistance of a wire is directly proportional to the length and inversely proportional to the area, so doubling the length of a wire should increase the resistance by a factor of two. This is because if the length of the wire is doubled, the electrons bump into twice as many atoms, so there will be twice as much resistance.
